About Me

With my 8+ years of experience as a Software Engineer, I have been involved in many project implementation processes - right from understanding business requirements to developing customized solutions.

During each software development life cycle, I have developed a deeper understanding of user centric design approaches. It's important for me to adhere to the fundamental principle of finding balance between business goals and user needs.

My driving force is understanding people, having empathy towards the challenges they are presented with, and helping them find solutions through intuitive design and insightful interactions. With my technical expertise and creative problem solving skills, I am confident in my ability to help clients solve real business issues and grow their businesses using the 'design thinking' approach. I believe in **"Good design is good business"**!
